

# PPR PIPES AND FITTINGS

## FOR HOT AND COLD POTABLE WATER APPLICATIONS

PPR pipes are frequently used for both household, construction, and compressed air applications. A PPR pipe will often be selected over traditional galvanized pipe, due to the fact that it is cheaper, less prone to damage and easier to install. Our PPR pipes are manufactured in sizes ranging for 20mm to 50mm. Overall making PPR pipes the ideal solution for hot and cold water piping applications.

- ✓ The outstanding temperature rating upto 85°C, pressure rating upto 20 Bar
- ✓ Pipes and fittings are fusion bonded using a simple heating tool, allowing a homogenous all plastic joint
- ✓ PPR pipes do not corrode or support biological growth
- ✓ PPR pipes have very good mechanical strength in combination with their elasticity that is consistent throughout the operating temperature range
